The Nicest Sudoku

Fill the 9 by 9 grid on the next page with numbers from 1 to 9 such that all of the following six constraints are satisfied:

The numbers in each row are distinct. 	The numbers in each column are distinct. The numbers in each box are distinct. 	The numbers in each relative position of the boxes are distinct. The numbers in the three mini-rows in the same relative position of the three boxes in each column are distinct. 	The numbers in the three mini-columns in the same relative position of the three boxes in each row are distinct. 

Once you have done so, submit your grid to HQ (via the Contact HQ form) as a string with numbers from left to right on each row, with the rows separated by slashes. For example, one possible submission may look like this:

123456789/234567891/345678912/456789123/567891234/678912345/789123456/891234567/912345678

even though it doesn't satisfy the given constraints.
